

# Spatial Analysis of Train Demand in Greater Melbourne

For GEOM90006 Assignment 4

Lang Chen, Yihan Bao

# Research Question and Motivation

## Research Question

1. What is the quantitative impact of weather, demographic and non-residential buildings on train demand in Greater Melbourne
2. What locations in Greater Melbourne currently do not have a train station but have high predicted demand?

Motivation: Better public transport promotes sustainability and liveability

- Both team members frequent train travellers, who are curious about what impacts demand at different stations
- Curious about priority of City Tunnel over other potential stations in Melbourne

# Data Source

<b><u>Dataset</u></b>	<b><u>Source</u></b>
<i>Train stop location data and passenger count data</i>	<a href="https://discover.data.vic.gov.au/dataset/train-service-passenger-counts">https://discover.data.vic.gov.au/dataset/train-service-passenger-counts</a>
<i>Census Data</i>	<a href="https://www.abs.gov.au/census/">https://www.abs.gov.au/census/</a>
<i>Non-residential Facilities Data</i>	<ul style="list-style-type: none"><li>- Shopping Centres: <a href="https://www.australia-shoppings.com/malls-centres/victoria">https://www.australia-shoppings.com/malls-centres/victoria</a></li><li>- Hospitals: <a href="https://springernature.figshare.com">https://springernature.figshare.com</a></li><li>- Sports Facilities: <a href="https://discover.data.vic.gov.au">https://discover.data.vic.gov.au</a></li><li>- Schools: <a href="https://www.education.vic.gov.au">https://www.education.vic.gov.au</a></li></ul>
<i>Rainfall Data</i>	Bureau of Meteorology
<i>SA2 / Greater Capital City Boundary Data</i>	<a href="https://www.abs.gov.au/statistics/standards/australian-statistical-geography-standard-asgs-edition-3/jul2021-jun2026/access-and-downloads/digital-boundary-files">https://www.abs.gov.au/statistics/standards/australian-statistical-geography-standard-asgs-edition-3/jul2021-jun2026/access-and-downloads/digital-boundary-files</a>

# Feature Hypothesis and Representation

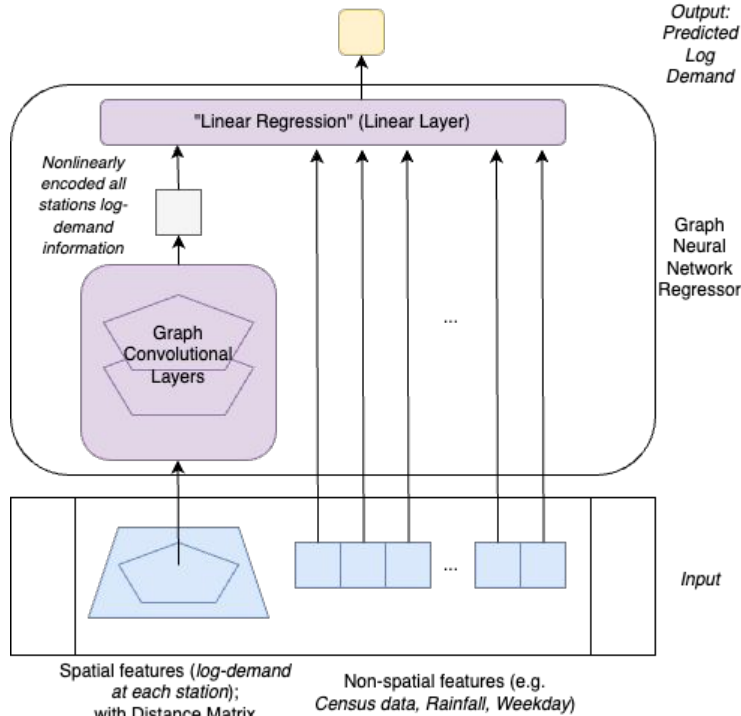

<u>Feature</u>	<u>Impact hypothesis</u>	<u>Feature Representation</u>
Mean Rainfall in SA2	<b>Neg</b> - travellers less inclined to use public transport in rain	(Self explained)
Census Attributes - Median/Mean	<b>Neg</b> [Wealth related] - those in economically better off would prefer private transport	$V_{\text{Station}} = \sum_{\text{SA2s}} \left( \frac{A_{\text{overlap}}}{A_{\text{station ANN-radius proximity}}} \times V_{\text{SA2}} \right)$
Census Attributes - Total	<b>Pos</b> [Total Population] - more potential customers	$V_{\text{Station}} = \sum_{\text{SA2s}} \left( \frac{A_{\text{overlap}}}{A_{\text{SA2}}} \times V_{\text{SA2}} \right)$
Existence of Non-Residential Buildings	<b>Pos</b> or <b>insignificant</b> - these buildings may draw people to travel to region	$I_{\text{Building}} = \begin{cases} 1 & \text{if building(s) exist in } \frac{1}{2} \text{ station ANN-radius proximity} \\ 0 & \text{otherwise} \end{cases}$ <p>(*ANN distance = 1.4 km)</p>
Weekday	<b>Pos</b> - more travellers for work related purposes	$I_{\text{Weekday}} = \begin{cases} 1 & \text{if weekday} \\ 0 & \text{otherwise} \end{cases}$
Weighted Station Demand	<b>Inconclusive</b> - positive as it should correlate with population but nearby stations could take demand away from each other	$w_{ij} = \begin{cases} 0 & \text{if same station} \\ \exp\left(-\frac{d_{ij}^2}{2\sigma^2}\right) & \text{otherwise} \end{cases}$

## Model (½): Regression with Weighted Geospatial Features

- Through pre-weighting data, transforms spatial data into **Tabular Data**
- Allows use of Machine Learning models such as **Linear Regression**, **Random Forests** and **Boosting Machines** for accurate prediction
- Using weighted geospatial features (demand) with regular regression serves similar effect to Geographically Weighted Regression
- One model instead of one model per location - better sharing of parameters

# Model (2/2): Attention-Graph Neural Network

- Graph Neural Network natural for spatial data
- Better encoder to non-linearly represent spatial information
- **Attention Mechanism** in graph automatically mines for relationships between points (stations)
- More sophisticated than Linear Regression at factor analysis
- Not good for inference on new points (Exogenous prediction)

## Evaluation (1/5): Model Performance

<u>Model</u>	<u>Out-of-Sample R2</u>
<i>Linear Regression</i>	0.3495
<i>Support Vector Machine</i>	0.5697
<i>Random Forest</i>	0.7901
<b><i>Light Gradient Boosting (LGB)</i></b>	<b>0.8624</b>
<b><i>Graph Neural Network (GNN)</i></b>	<b>0.9952</b>

*Note: LGB is used for forecasting as GNN is only applicable for feature inference*

# Evaluation (%): Feature Analysis

<u>Feature</u>	<u>Linear Interpretation</u>	<u>GNN Interpretation</u>
<i>Weighted sum demand of other stations</i>	N/A	1% increase in factor=> 0.3% demand inc of this station
<i>Weekday</i>	Weekday has 3.9% less demand than weekends	Weekday has 0.85% more demand than weekends
<i>School</i>	Stations with schools nearby has 70% demand increase	Stations with schools nearby has 0.03% demand increase
<i>Hospital</i>	Stations with hospitals nearby has 41% demand increase	Stations with hospitals nearby has 0.25% demand increase
<i>Sports Facilities</i>	Stations with sports facilities nearby has 6% demand decrease	Stations with sports facilities nearby has 0.2% demand increase
<i>Shopping Centres</i>	Stations with shopping centres nearby has 49% demand increase	Stations with shopping centres nearby has 1.21% demand increase

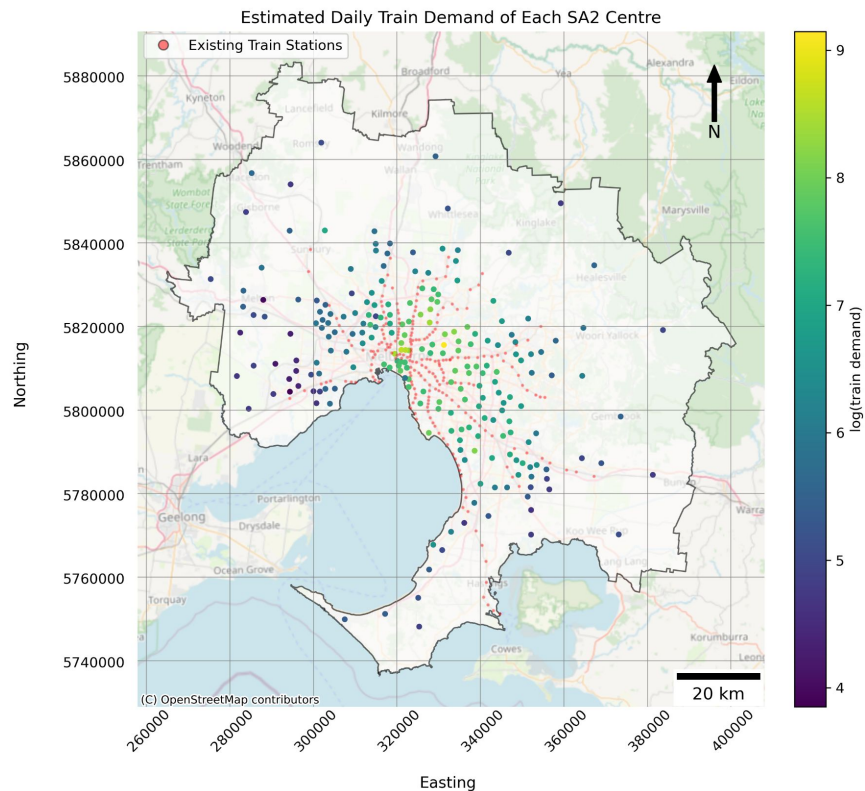

## Evaluation (3/5): Feature Analysis cont.

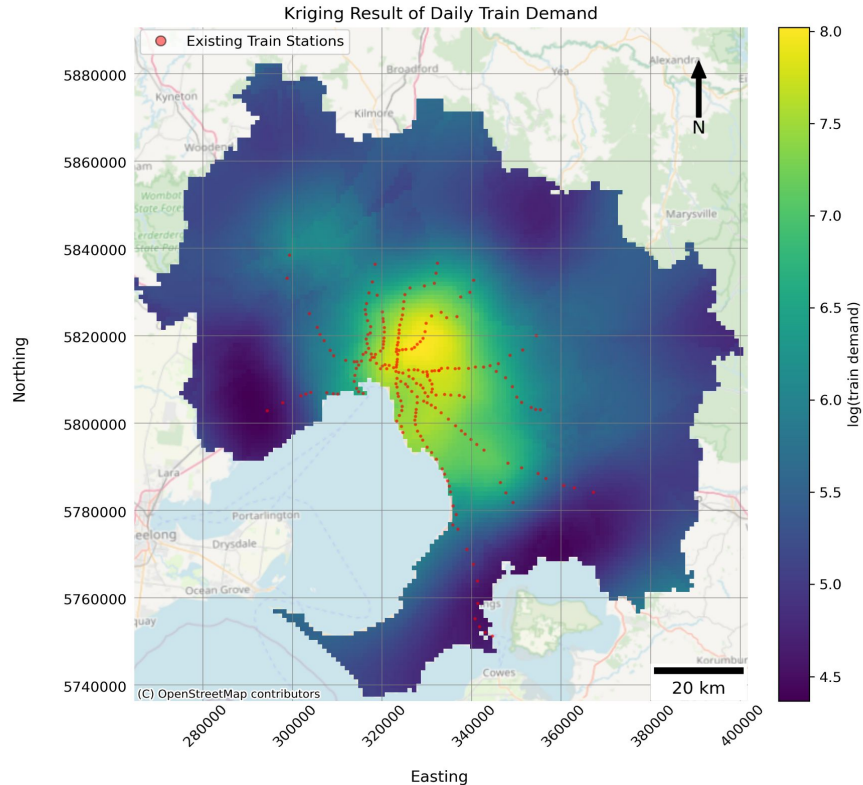

<u>Feature</u>	<u>Linear Regression</u>	<u>GNN</u>
<i>Mean Rainfall</i>	1 standard deviation (sd) increase in median annual rainfall => 57% decrease in demand	1sd increase => 0.23% demand decrease
<i>Total Population</i>	1sd increase of total nearby population => 48.6% increase in demand	1sd increase => 2.18% demand increase
<i>Median weekly rent</i>	1sd increase of median nearby weekly rent => 41% decrease in demand	1sd increase => 0.27% demand decrease
<i>Median weekly mortgage</i>	1sd increase of median nearby weekly mortgage => 41% increase in demand	1sd increase of median nearby weekly mortgage => 0.74% demand decrease
<i>Median weekly income</i>	1sd increase of median nearby weekly income => 57% increase in demand	1sd increase of median nearby weekly income => 0.47% demand decrease
<i>Median weekly household income</i>	1sd increase of median nearby weekly household income => 77% decrease in demand	1sd increase of median nearby weekly household income => 1.09% demand increase

# Evaluation (%): Point Estimates

<u>Ranking</u>	<u>SA2</u>	<u>Predicted Daily Demand</u>
1	Balwyn North	9331
2	Carlton	5717
3	Fitzroy	5452
4	West Melbourne	4673
5	Heidelberg West	4519

# Evaluation (%): Kriging

# Evaluation (5/5): Future Directions

- Research GNN's encoding ability for prediction
- Spatial-temporal forecasting of daily train demand
- Empirical factors when recommending new stations
